<sup>1)</sup> Even higher for short periods

<sup>2)</sup> Brittle temperature

<sup>3)</sup> Except PVC hoses, which can be sterilised with steam at a temperature of 121 °C

<sup>4)</sup> Frequent steam sterilization reduces mechanical stability!

<sup>5)</sup> Clean apparatus with distilled water first (to avoid stress cracking corrosion). In the case of closed vessels, remove or slightly open lid, do not close lid tight again until the vessel has cooled down.

**+ = excellent chemical resistance**

The substance does not result in any damage to the plastic after 30 days of permanent contact. The plastic may remain resistant for years.

**0 = good/limited chemical resistance**

Within 7 to 30 days of permanent contact, the substance provokes minor damage which may be reversible (softening, swelling, reduction of mechanical strength, discolourations).

**- = low chemical resistance**

Not suitable for permanent contact with this substance. Damage to the plastic may occur immediately (reduction of mechanical strength, deformation, discolourations, splits, dissolution, risk of breakage).
